

WHAT YOU ABSORB IS KEY FOR OPTIMUM HEALTH

Water is essential to your survival. Your body is about 75% water and that number decreases as you age. Because of that, as you get older it becomes more important to stay hydrated with the right type of water - water that helps minimize the effects of acid, helps remove toxins, and easily hydrates your body. You need great tasting water with antioxidant properties and proper pH levels.

Water in its most natural state has several important characteristics such as: a high alkaline pH, active hydrogen, and a negative oxidation reduction potential, also known as ORP, which is the ability for the water to act as an anti-oxidant. Unfortunately you cannot get these qualities from water that comes from a tap, nor can you buy water with these qualities in a bottle. Are you drinking water that supports wellness, or water that may have acidic properties? The new LivingWater system contains revolutionary patented technology. It uses exclusive Direct Disk Ionization Technology to produce high alkaline pH water with active hydrogen and an ORP level that that is considered more effective than anything else on the market.

Since the first home water ionizer was introduced, the competitive field has been about who has the most power or surface area. No longer, Now it's all about results and affordability. Same results for less than half the price sounds like a great idea!

|--|---|--|--|---|
| <p>Strong acidic water (ph of 2.7 or less) is oxidizing or cleansing. Use it for first aid, for hand washing and for cleaning</p> | <p>Mild acidic water with a pH of 4.5 to 5.5 is astringent. Use it for skin and hair care, and general cleaning purposes to remove stains and clean glass.</p> | <p>Filtered, non-ionized water maintains same pH as source tap water. Use it for taking prescription drugs and making baby formula.</p> | <p>Filtered, non-ionized water maintains same pH as source tap water. Use it for taking prescription drugs and making baby formula.</p> | <p>Strong alkaline water – 10.0 to 11.5 pH – is used for washing fruits & vegetables and general household cleaning. It is good for removing oil residue & grime from cooking surfaces, and for laundry or dish washing.</p> |

NOT ALL WATER IS CREATED EQUAL

INTRODUCING THE RIGHT WATER, LIVING WATER®

No one wants to be partially healthy. Take control of your health with Vollara's new LivingWater ionizer. Drinking enough water isn't enough. You have to drink the right kind of water.

EMPOWERS YOU TO HAVE OPTIMAL HEALTH

Water with anti-oxidant properties and proper pH alkalinity creates Uncompromising Health™ from the inside out GOOD FOR YOU AND THE PLANET

Energy efficient, produced with fewer natural resources, and reduces the use of plastic bottles and polluting cleaning products. NEXT GENERATION DESIGN

Results and smart features unmatched in the market place
ECONOMICAL & AFFORDABLE Optimal results for an outstanding price

DOUBLE FILTRATION

Easy to replace filters. Remove the filter cover by sliding towards the right. Twist and remove filters.

EASY TO READ

The easy to read LED panel shows the pH you have selected, the number of liters that have been through the machine, and the flow rate. The buttons on the right determine the pH of the water being produced; the buttons on the left—function keys—can be used to adjust the pH and ORP of the water to account for source water differences. The ionizer begins to function when water is turned on—there is no on/off button switch.

- LivingWater® offers 8 different pH levels, ranging from 4.0 acidic water to 10.0 alkaline water plus a SUPER function to achieve those extreme pH levels when needed.
- Because results are dependent upon source water, each level can be adjusted to fine-tune pH and ORP level.
- An easy to read, multicolor LED control panel keeps track of performance particulars, including total liters produced, life indicators, and pH setting. Each pH setting changes the background color of the LED panel.
- Direct Disk Ionization (DDI) Technology is a revolutionary approach to water ionization. Designed by the inventor who holds the first patent for water ionization, it does not require numerous plates or membranes and square inches of surface area does not apply, as they do in conventional plates ionization units.
- While conventional units require a low flow rate to maximize ORP (Oxidation Reduction Potential), LivingWater with Direct Disk Ionization (DDI) Technology can achieve the same ORP levels at a higher flow rate.
- The Direct Disk Ionization Technology and constant power output design produce ionized water with the least amount of electrical energy needed. LivingWater is a more efficient use of energy than conventional plate units.

EASY MAINTENANCE

Semiannual cleaning with citric acid is achieved using the Salt Port access and recirculation pump.
