

The Amazing Julie Watson Story and How It Can Help You!

In June 2009 we checked the price of Tide's 100-oz 2X-ULTRA liquid detergent. The label says it will do 52 loads for \$16.29: 31cents per load.

The Watsons have had 16 kids since 1979. Each week Julie does 40 loads of wash. Without **LaundryPure** that would cost \$12.40 per week or \$644.80 per year.

Thanks to **LaundryPure**, Julie now needs no detergent at all. Her clothes come out clean, soft, and sanitized.

LaundryPure works only in cold water—a welcome change at the Watson home since the kids always wanted more hot water for showering. They save an additional \$200 per year on propane.

LaundryPure mounts behind the washer and processes the laundry water—cold only. Silver ions are added. The water is converted to a mild solution of hydrogen peroxide, a safe sanitizing agent used in hospitals and for first aid around the world. This unit gives you clean, sanitized, fluffy laundry... and PAYS FOR ITSELF. In Julie and Glen's case, it has paid for itself three times over.
